July 12, 2016

Dear Residents of Pine Avenue/Hobson Avenue/Miles Street area:

Starting the week of Monday, July 18, the Water Division of the Department of Public Works will begin the installation of a new 8-inch cement lined ductile iron water main on Pine Avenue, from Main Street to Hobson Avenue. During this project, you may temporarily experience discolored water and low water pressure.

Once this project is completed, the upgraded water main will improve both water quality and quantity. This upgrade will also allow us the opportunity to increase fire protection in the area.

Work will begin at approximately 8:00 AM. We will try and limit disrupting egress as much as possible. Please do not park any vehicles on the road during construction. Please feel free to talk to our crew directly if you have a problem and we will try to accommodate you if possible.

We anticipate completing the water main installation in approximately three weeks and we will begin transferring individual water services to the new main approximately one week later. You will be notified by Water Department personnel if your water service will be temporarily interrupted. Since difficulties can occur and water service could be unexpectedly disrupted, we suggest residents keep a gallon of water in the refrigerator.

If you have any questions or concerns please feel free to contact this office at (978) 658-4711. We apologize in advance for any inconvenience this may cause you and thank you for your patience during this project.
