**Subject: Notification of Start of Construction: Burlington, Wilmington, and Woburn Access Road Maintenance Project**

Dear Neighbor,

As part of our everyday effort to deliver reliable energy to our customers and communities, we are scheduled to begin work to perform maintenance to our existing access roads along the electric transmission corridors in Burlington, Wilmington, and Woburn. Maintaining infrastructure is one of the many ways Eversource supports the safe and secure transmission of electricity throughout the region.

### We're Always Working to Serve You Better

Since your property is located on or near the electric transmission corridor we want to make sure you are informed of our work. We will be performing maintenance work on our existing access roads along the right-of-way at these locations:

**Burlington** – This work will take place in the right-of-way off of Locust Street, through Mill Pond Reservation, and the town line with Wilmington.

**Wilmington** - This work will take place in the right-of-way off of Chestnut Street, Main Street, Old Main Street, Border Avenue, and the town lines with Burlington and Woburn.

**Woburn** – This work will take place in the right-of-way off of Breed Avenue, Merrimac Street, New Boston Street, Commerce Way, Constitution Way, Dragon Court, and the town line with Wilmington.

Activity associated with this access road work includes mowing, grading, compacting, and laying gravel. Starting soon crews from ATL, an approved Eversource contractor, will begin performing this work within the existing rights-of-way.

### What You Can Expect

Since your property is on or near the project route, here is important information about how we will work in your neighborhood:

- **Reliable Service:** Be assured that this work will not interrupt electric service to your property.
- **Proper Identification:** All people working on this project carry identification. Eversource contractors will occasionally be in your neighborhood to tell you what to expect with the upcoming site activity. They may leave an informational doorhanger at your home or knock on your door to talk to you about the project work. We're letting you know about this outreach in advance, so you can be confident that the outreach is being conducted by a legitimate Eversource representative and is not a scam.
- **Where We Will Be Working:** Construction activity will take place within the existing right of way (transmission corridor) in Burlington, Wilmington, and Woburn.
- **Communication:** Keeping the lines of communication open is important to us. Feel free to reach out to us by email at [ProjectInfo@Eversource.com](mailto:ProjectInfo@Eversource.com) or call 1-800-793-2202 if you have any questions.
- **Construction Hours:** The hours for construction are typically 7:00 a.m. to 6:00 p.m. Monday through Friday and Saturday 8:00 a.m. to 6:00 p.m.
- **Construction Activities:** Project construction will include the following activities. *Overall*, you can expect:
  - Construction vehicles on the right of way, including heavy equipment, though we will make every effort to minimize any impact to your property.
  - Site grading, mowing/vegetation removal and adding gravel all along the existing access roads.

- When the project is completed, crews will restore any areas that were disturbed by the work.
- **Project Completion:** Weather permitting, we expect all work, including restoration, to be completed by January, 2020.

### Contact Us

Eversource is committed to being a good neighbor and doing our work with respect for you and your property. Again, if you have any questions about this work, please call 1-800-793-2202 or email us at [ProjectInfo@eversource.com](mailto:ProjectInfo@eversource.com).

Sincerely,

*Brian McDevitt*

### Work Area Preparation

Construction vehicles and equipment must be able to access each transmission structure. For these vehicles, we will build or enhance gravel roads to provide access to structure locations.

Temporary soil erosion and sedimentation controls (for example, silt fences and straw bales) and other environmental controls may be installed near the work areas during construction. We will maintain these controls as needed throughout the construction process. Typically, these environmental controls are removed after construction, though some may remain until the area is restored.
